# Theme Manual

Fabius - WordPress Theme

# Thank You :)

Thanks for purchasing our theme. We really appreciate your support and trust in us. We worked hard to make the Fabius WP theme easy to edit as much as possible. Hopefully, you will enjoy using it.

Have fun!

## How To Install?

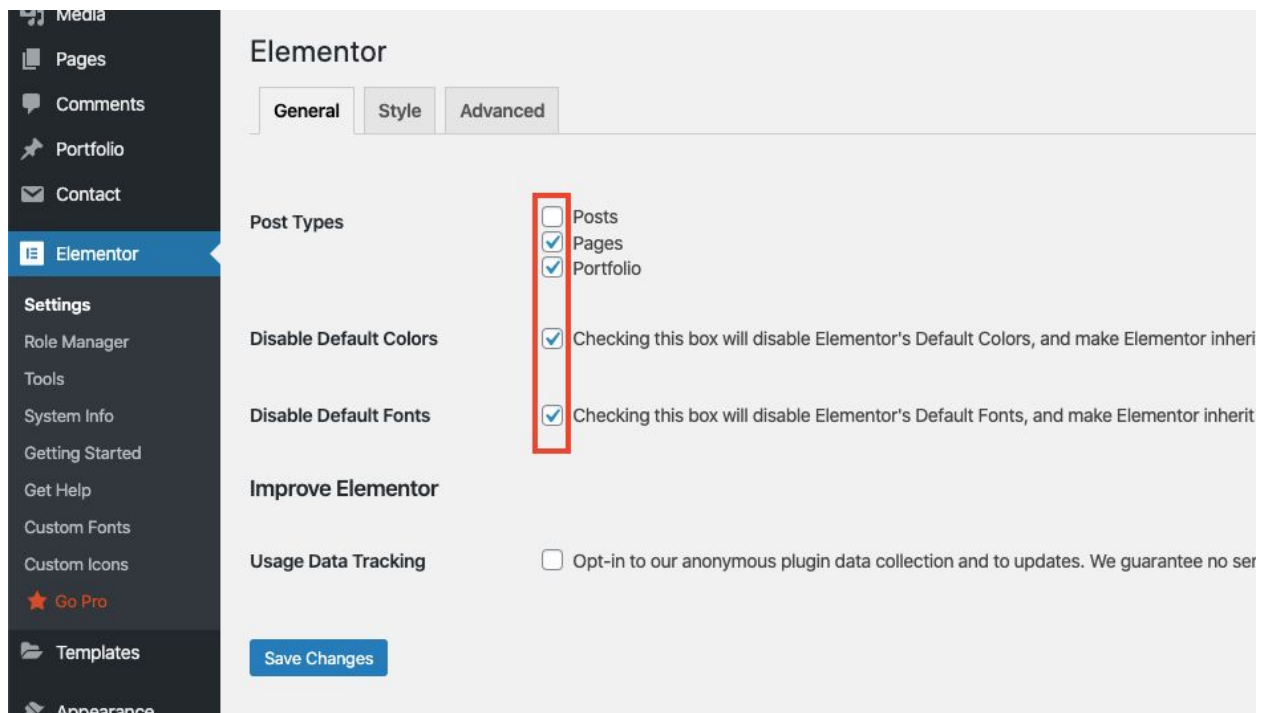

Once you have the zip archive ready, you need to go to your dashboard, which is [www.yourwebsite.com/wp-admin](http://www.yourwebsite.com/wp-admin) and go to **Appearance > Themes > Install Themes** and, in the top menu, select **Upload**. Now, select the zip archive and just install it normally.

\*Note - Theme is placed in **"Fabius WP - THEME"** folder and you need to upload a zip file from that folder (zip file called **fabius-wp.zip**) Also, there is a Child theme available placed in same folder (zip file called **fabius-wp-child.zip**)

After installing the theme, you will get alerts of required plugins **CocoBasic - Fabius WP, CocoBasic - Fabius Elementor Widgets, Elementor** and **Contact Form 7**. You need to install and to activate them.

# Set Up Elementor

After you have installed plugins, you need to set up some settings in Elementor. Go to **Dashboard > Elementor > Settings > General** and check options like on image bellow:

Don't forget to click "**Save Changes**".

# Import Content

This theme comes with our dummy/demo content which can be imported directly on your website to achieve the same look as our demo. To import our content go to your WordPress admin page dashboard and select **Tools > Import** and then choose WordPress option.

Here is a small video tutorial on how to install and import demo content.

<https://youtu.be/qGPeVeNZZ2g>

Demo Content is placed in the “Fabius WP - DEMO CONTENT” folder. Theme comes with two demo content files - **demo1** and **demo2** You need to **import just one** demo content file.

After you have imported dummy/demo content go to **Dashboard > Settings > Reading** and set **Front page displays: “A static page”** and select **OnePage** for **Front page**. For **Posts page** select **Blog**.

**Reading Settings**

Your homepage displays

☐ Your latest posts

☒ A [static page](#) (select below)

☐ Discourage search engines from indexing

*It is up to search engines to honor this request.*

[Save Changes](#)

# Creating Menu

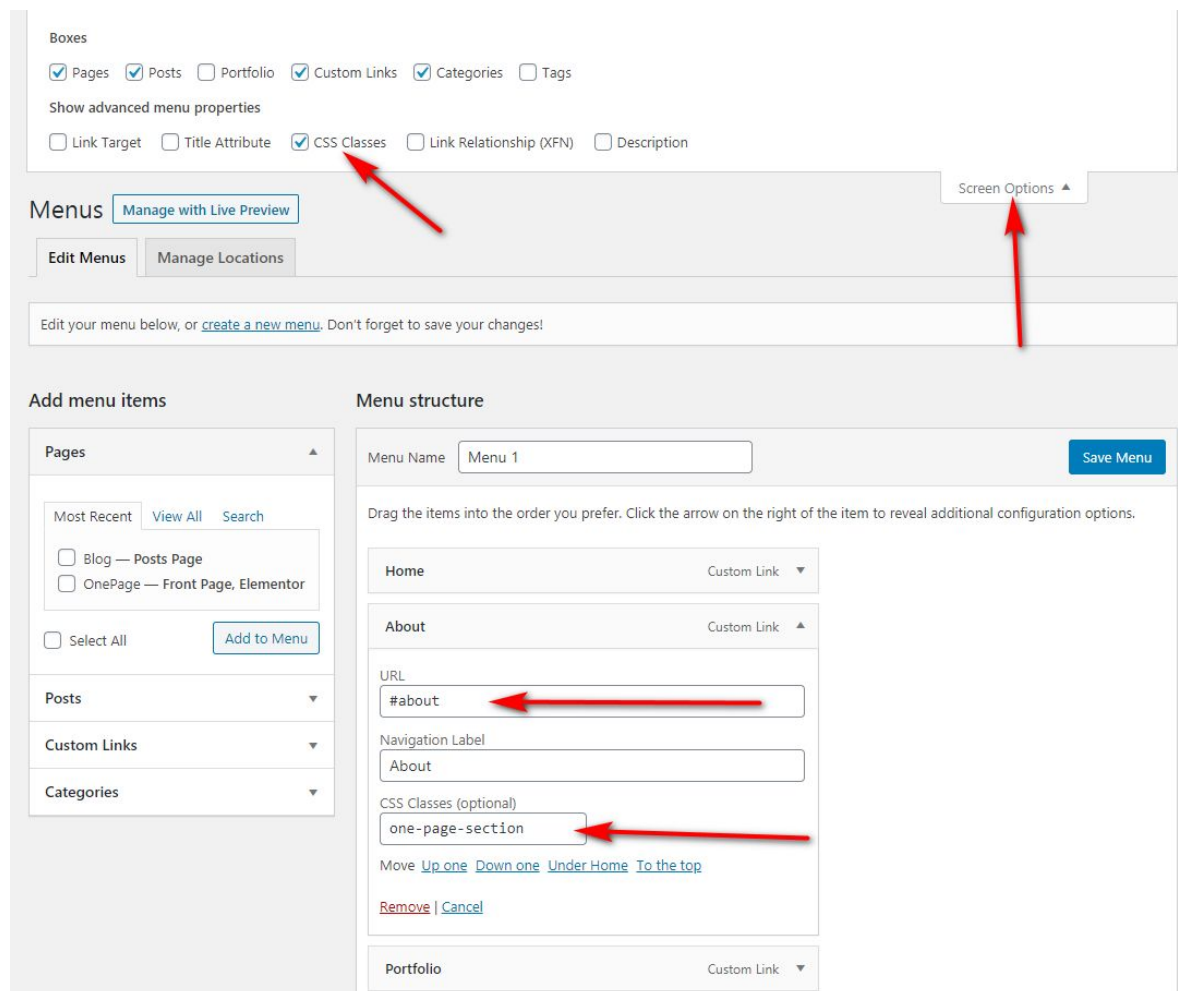

In order to create a menu, go to **Appearance > Menus**. You can see on the image below an example of how the menu can look like.

\* Don't forget to check "**Main Menu**".

# Set / Edit Menu Items and Sections in OnePage

To set/edit Menu items in OnePage you need to add custom class **"one-page-section"** and link/URL to set in format **"#PageIdSlug"** (example: #service, #portfolio, #contact ...). Take a look at image how to enable option for custom class and how to set it:

Also, the important part is to have a section in OnePage with an ID slug name like one which you have set in the menu (in our example it is **"about"**).

Take a look at the image below how to set/edit ID slug for section in OnePage (go to Dashboard > Pages > OnePage and edit that page with Elementor):

Important part is that for CSS ID (ID slug) you set just a slug name without "#".

Also, each section in OnePage must have a class called **op-section**.

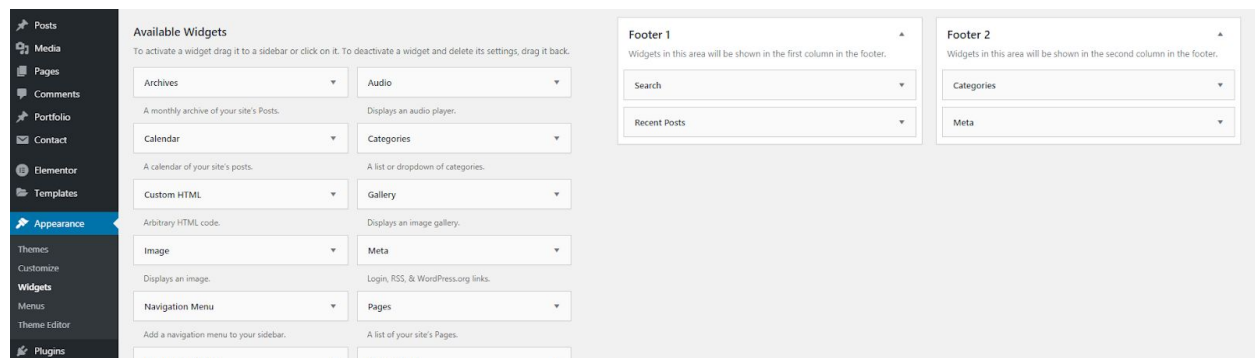

# Sidebar (Footer) Widget

**\*Note** - on our demo we don't use footer widget

To set/edit widgets in footer go to:

**Dashboard > Appearance > Widgets**

Here is how it looks in the widgets area.

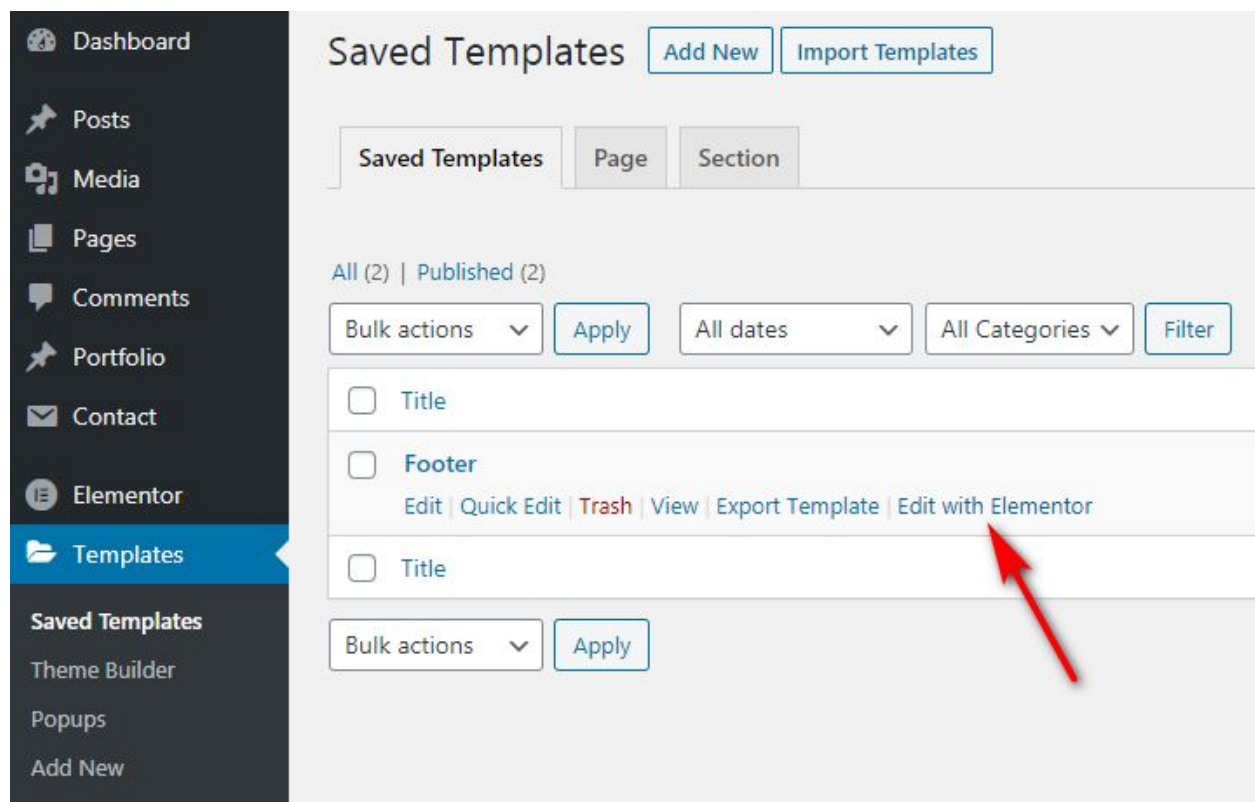

Widgets in the Footer 1 will be on the left side in the footer area.

Widgets in the Footer 2 will be on the right side in the footer area.

# Footer Content

On our demo we don't have a footer but there is an option to set one. When you import demo content you will get a template for Footer which is placed in the **Dashboard > Templates > Saved Templates**

To edit this content, go to **Dashboard > Templates > Saved Templates** and **Edit with Elementor**

To “activate” the footer (to make it visible on all pages) take a look below in the **Theme Customization** for part **Footer Selection**.

# Theme Customization

To open customizer click on ***Dashboard > Appearance > Customize***

## Site Title, Tagline and Site Icon Customizing

×Published

< Customizing Site Identity

### Site Title

### Tagline

### Site Icon

*Site Icons are what you see in browser tabs, bookmark bars, and within the WordPress mobile apps. Upload one here!*

*Site Icons should be square and at least 512 × 512 pixels.*

## Footer Selection (select from list of Saved Templates)

A screenshot of a web application interface for customizing the footer. At the top, there is a header bar with a close button (X) on the left, a 'Publish' button with a gear icon on the right, and a breadcrumb trail showing '< Customizing Footer'. Below this, the main content area is titled 'Custom footer layout' with the instruction 'select one of Elementor templates'. A dropdown menu is open, showing the selected option 'footer'.

## Images Settings

A screenshot of a web application interface for customizing the images section. The header bar includes a close button (X), a 'Published' status indicator, and a breadcrumb trail showing '< Customizing Images Section'. The main content area is titled 'Preloader Gif' and contains a dashed box with the text 'Select image'. Below this, there is a 'Preloader Width:' label and a text input field containing '50px'. The next section is titled 'Header Logo' and features a large green square with a white stylized logo. Below the logo are two buttons: 'Remove' and 'Change image'. At the bottom, there are two more text input fields: 'Logo Width:' with '140px' and 'Logo Width (on small resolutions):' with '65px'.

\* On our demo we don't use any preloader Gif animation but there is an option to set one.

# Content Editing

To edit content just open **OnePage** and replace the existing content with your own (text, images, videos).

After importing demo content, you will have pages like on image.

# OnePage

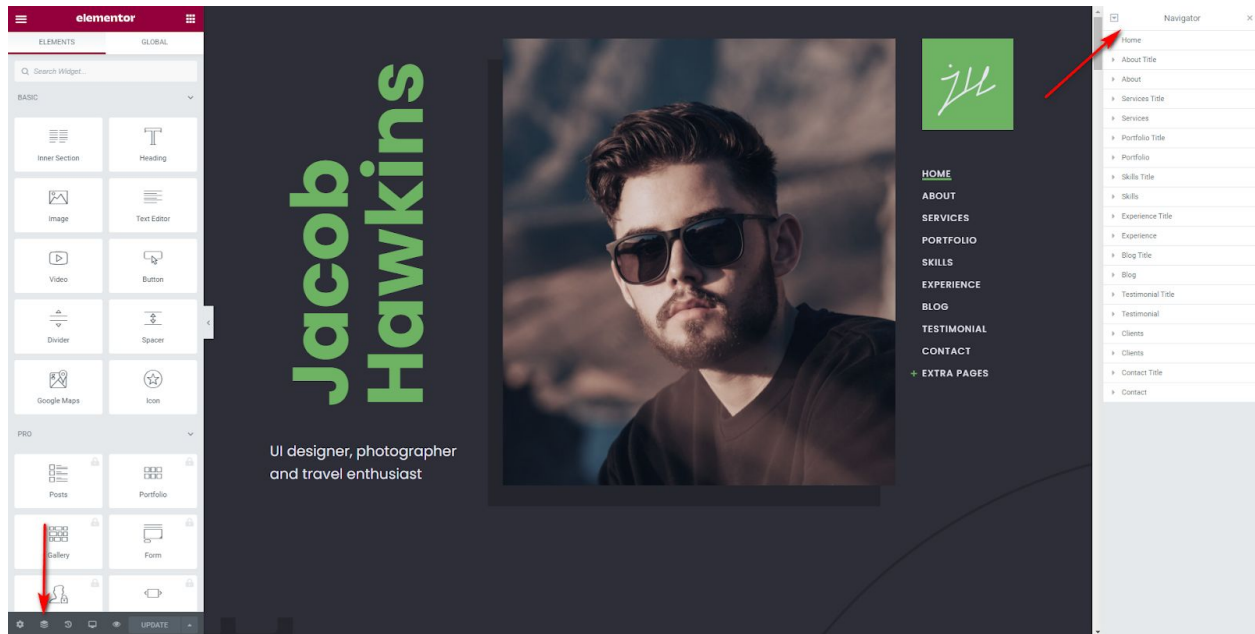

This page is created using the Elementor. When you start to edit with Elementor this page you will get this:

In this page are placed all sections which are part of the Front / OnePage page (like Home, About, Portfolio, Skills, Contact ...).

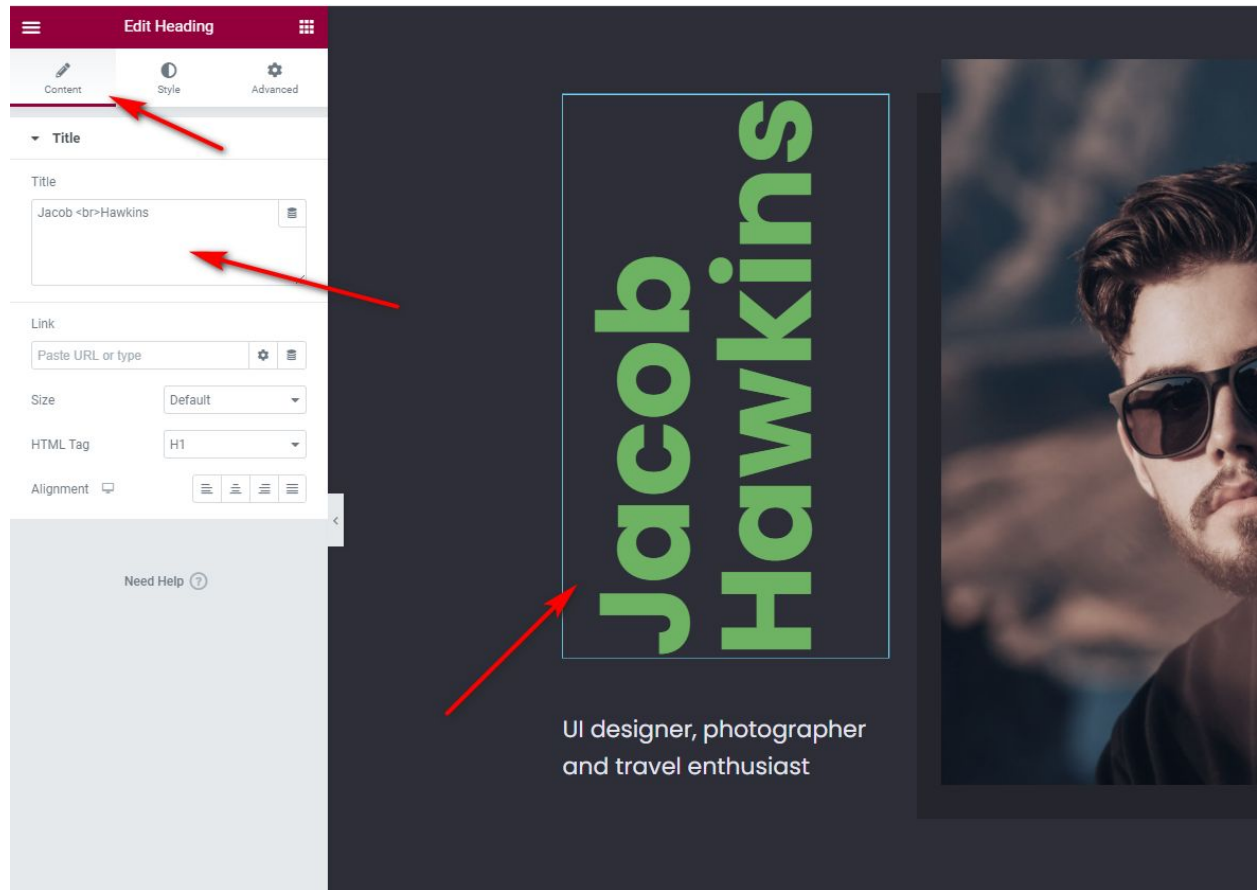

I am recommending to enable **“Navigator”** option before you start to edit the content because it will be much easier to go through the Sections. Take a look at the image below how to enable **Navigator** and how you can easily select each section:

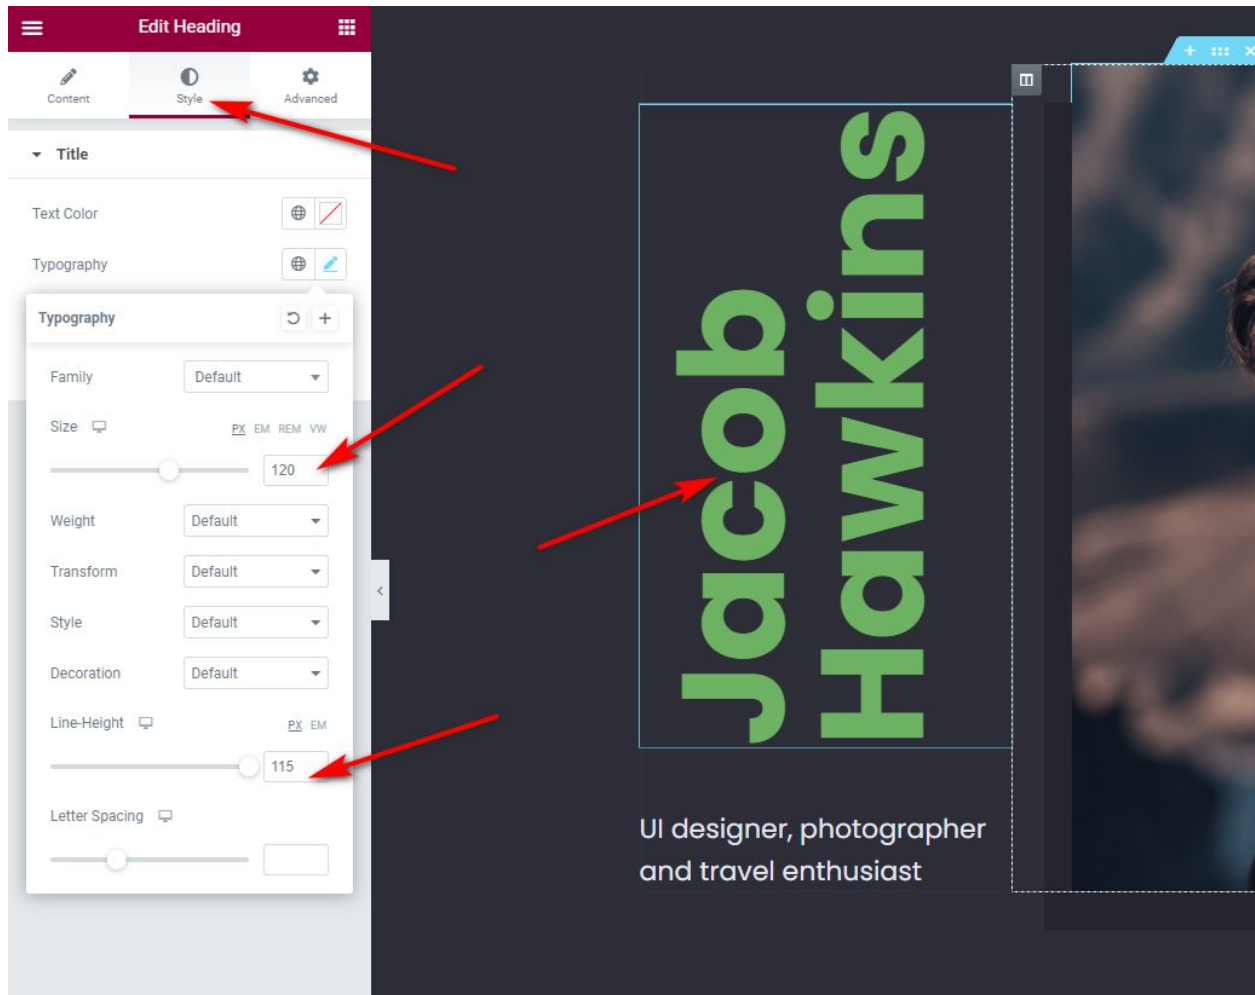

All content is created using Elementor and it should be easy for you to edit content - just click on element which you want to edit and in the left part of the screen you will get the area where you can change the content (text, images, icons...) or some style (like font family, color, margins/padding).

Here is an example of how to change the big intro text and image on the Home section. Click on the text and in the left part of the screen you will get this area:

In case that you want to set some other font family or size or maybe you want to change the color of the text, you need to use the **Style** tab.

To change the big image just click on it:

# Portfolio Section

When you edit the Portfolio section and click on portfolio items, in left part you will get area like this:

In the **“Style”** tab you have a lot of options where you can customize colors, fonts, etc...

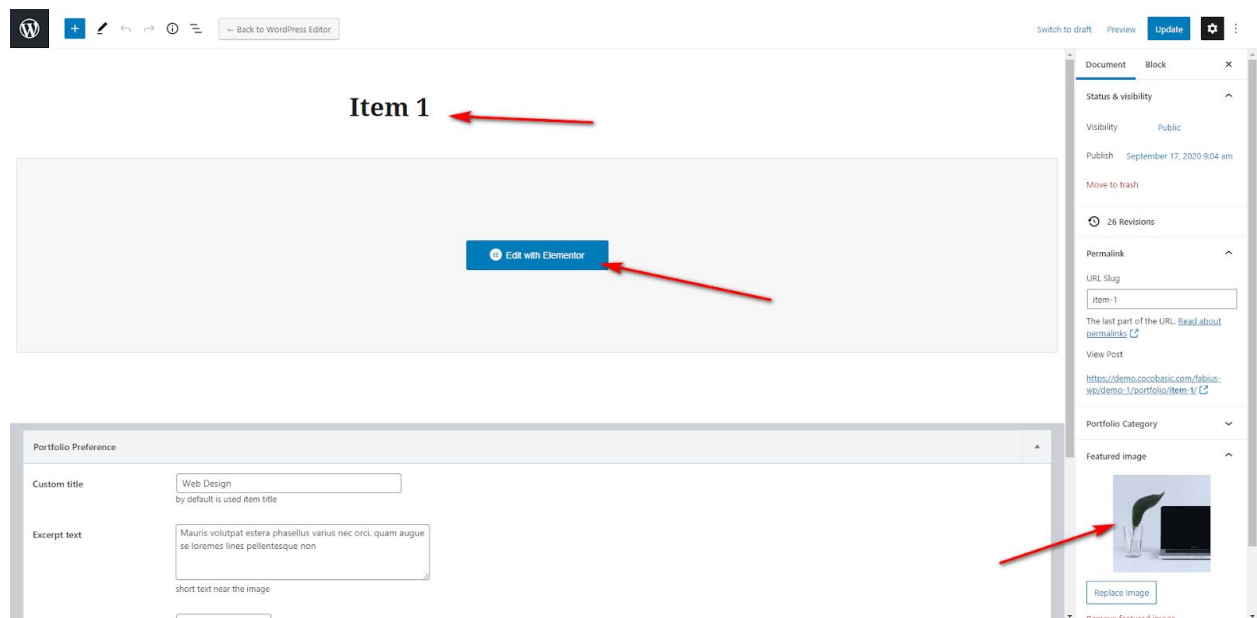

# Add/Edit Portfolio Item

To Add a new Portfolio Item you need to open

***Dashboard > Portfolio > Add New***

Enter a Title and after that you need to set **“Featured Image”**.

After you have set the image, you need to add/edit item content using Elementor (click on **“Edit with Elementor”**)

Also, below the editor, there is **“Portfolio Preference”**:

Portfolio Preference

Custom title

Web Design

by default is used item title

Excerpt text

Mauris volutpat estera phasellus varius nec orci, quam augue se lorem lines pellentesque non

short text near the image

Link thumb to

This post (ajax) ▾

Link thumb to Image:

Upload Image

Link thumb to Video

For example: <http://vimeo.com/XXXXXX> or <http://www.youtube.com/watch?v=XXXXXX>

Link thumb to External URL:

Set URL to external site

Here you can set **“Custom title”**, **“Excerpt text”** and **where/how to link** when you click on a portfolio item.

If you link to **“This Post (ajax)”** when you click on a featured image it will load via ajax content on the **“Portfolio”** page.

If you link to **“This Post (regular)”** when you click on a featured image it will open a portfolio item on a regular way (like any other page - no ajax).

If you link to **"Image"** you need to set **"Link thumb to image"** with image URL - it will open the image in pop-up when you click on featured image.

If you link to **"Video"** you need to set **"Link thumb to video"** with:

YouTube video in format:

**<http://www.youtube.com/watch?v=XXXXXX>**

or Vimeo video in format:

**<http://vimeo.com/XXXXXX>**

Now, when you click on a featured image it will open the video in pop-up.

If you link to **"External URL"** you need to set URL in **"Link thumb to External URL"** in format **<http://yoururl.com>**

Now, when you click on a featured image it will open your URL.

# Contact

In this section you will find a shortcode for contact form. It is shortcode from **Contact Form 7** plugin which looks like this:

```
[contact-form-7 id="5" title="Fabius Contact Form"]
```

The image shows a screenshot of the Contact Form 7 plugin interface. On the left, the 'Edit Contact Form' sidebar is visible with tabs for 'Content', 'Style', and 'Advanced'. The 'Content' tab is active, showing a text area with the shortcode `[contact-form-7 id="5" title="Fabius Contact Fo"]`. A red arrow points from this text area to the right. On the right, a preview of the contact form is shown. It has a green background and contains the following fields: 'Name', 'Email', 'Subject', 'Message', and a 'SEND MESSAGE' button. A red arrow points from the 'Message' field in the preview back to the shortcode in the editor.

To set/edit your contact form you need to open **Dashboard>Contact>Contact Forms** and to edit the contact form.

Our demo code for contact form looks like this:

**Fabius Contact Form**

Copy this shortcode and paste it into your post, page, or text widget content:

```
[contact-form-7 id="5" title="Fabius Contact Form"]
```

**Form** Mail Messages Additional Settings

**Form**

You can edit the form template here. For details, see [Editing form template](#).
